Intelligent digital display instrument outline

This series products adopted the surface package modularization craft, have improved greatly the anti-interference ability of the instruments, have display, transmit communication, universal signal input function and so on. They apply to indication and control of various physical quantity check signal such as temperature, humidity, pressure, liquid level, instantaneous flow, velocity etc., and for various nonlinear input signal can carry out high accuracy linear compensation. They may widely used to the fields such as electrical power, metallurgy, chemical industry, petrochemical industry, papermaking printing and dye, making, tobacco, and space flight base, etc.

Adoption of up-to-day non-jumper technique makes the input port to gain universal signal input function, and users can realize light switching between multi input signal (thermocouple, thermo resistance, remote pressure, mV, standard voltage/current signal) only need by change internal parameters. Circuit board through optimization design and continual perfection of production technology, has reduced temperature drift, has improved anti-interference property, ensure products stability and reliability during long-term operation.

Instruments adopt high brightness LED digital display and high-resolution light column display (proportion display) makes measurement/control value display more clear and visual.

Output loops all adopt photoelectric isolation; its anti-interference ability is strong. It may with serial communication interface, can carry out both-way communication between it and every device with serial interface, and constitute network control system.

The instruments have various standard outline dimensions, can apply to various measurement control field. Circuitry adopts card insert structure, makes assembly convenient extremely.

Relative explain:

(1) Indication color

LED digital code tube have two colors: red, yellow-green, and light column have two colors: red and green, may be selected. When instrument out of factory approved that: digital display instrument with single screen, LED is red; and digital display instrument with double screen, its main screen is red, assistant screen is yellow-green; light column instrument is red. If need to change display color, it may be explained by user while ordering.

(2) For three screen digital display instrument, three screen all is approved red.

(3) Measurement accuracy class is approved 0.5 when out of factory, if need 0.2 class, explain while ordering, please.

(4) Terminals of instrument explain

 is symbol of input terminal  is symbol of output terminal

(5) Wiring drawing of this type spectrum instrument, for which if change we will not give notice, the random wiring drawing shall prevail.

> Main technical parameter

Input signal	Analog quantity ·thermocouple: B, S, K, E, J, T, WRe3-25 etc. ·Thermo-resistance: Pt 100, Cu 50, Pt 100..1 ·Current: 0~10 mA, 4~20 mA etc. (input impedance ≤250 Ω) ·Voltage: 0~5 V, 1~5V, mV etc. (input impedance ≥ 1 MΩ) ·Remote transmission pressure resistance: 30Ω~350 Ω
Output signal	Analog quantity output: ·DC 4~20 mA (load resistance ≤ 750Ω) ·DC 0~10 mA (load resistance ≤ 1.5 KΩ) ·DC 1~5 V (load resistance ≥ 250 KΩ) ·DC 0~5 V (load resistance ≥ 250 KΩ) Switch quantity output: ·relay control output ·Contact capacity (resistive load) –AC220V/3A, DC 24V/3A ·Silicon controllable rectifier (SCR) zero-crossing triggering impulse output——can trigger 600V/100A SCR Solid state relay control signal output (SSR) – output DC9V/30 mA ·SCR zero-crossing triggering output –bidirectional thyristor 600V/5A Communication mode RS-232 C, RS-485 Baud rate:300 bps~9600 bps (free set) Feed output:DC 24 V, load ≤30 mA
Property	Measurement accuracy: ·digital: ±0.5% FS ±1 character ·light column: ±1%FS Resolution: digital display: ±1 character light column display: ±1 line Display range: ·digital:-1999~9999 ·light column: 0~100% Display mode: ·four bit high brightness LED digital display, ·101 lines high resolution light column display, ·LED working state display, ·single screen digital/double screen digital display, ·single screen digital + single light column display, ·double screen digital + double light column display, Control mode: may choose up limit, down limit, or up-up limit, down-down limit control Control set value: control set value and turn difference value can be free set in full range Temperature compensation: 0~50°C temperature automatic compensation Parameter set: ·board light contact push-key digital set ·parameter set value, after black out will permanent keep ·cipher code lock-in parameter setting value Protective mode: · alarm when thermocouple/thermo-resistance input line break · alarm for input exceed/under range · flicker alarm for input exceed range · LED indication for relay output state · work abnormality automatic reset
Electromagnetic compatible	Power and I/O terminal all through 2KV/5KHz grouped pulse anti-reference test,IEC NS6100-4A) (electric quick transient pulse group, surge), ±2KV/5KHz in the quality, anti-reference, and safety standard aspects in accordance with international standard.
Operation environment	Environment temperature: -30~70°C Relative humidity: ≤85% non-condensate dew, avoid to use in the environment with corrosive and explosive gas Supply voltage: linear power AC190~240 V Switch power AC / DC 90~265 V AC/DC22~26 V Power consumption: ·≤5 W (AC 190~240 V linear power) ·≤4 W (AC/DC85 V~265 V switch power) ·≤6 W (AC/DC 22 V~26 V switch power)

Display feature	1								Single -screen display	
	2								Double-screen display (down screen display input type/alarm set value)	
	3								Single-screen single light column (only 1, 2, 9 has outline dimension code)	
Input type		□□							See "input type table"	
Communication mode			0						No communication interface	
			2						RS-232C communication interface	
			8						RS-485 communication interface	
Control/alarm output				0					Display (no control /alarm output)	
				1					One relay + SSR (AL2) DC 9V	
				2					Two relays	
				4					Four relays	
				5					One relay + SCR (AL2), may trigger 600V/100A SCR	
				6					One relay + SCR (AL2) load 5A	
				9					Special control output	
Transmission output				0					No transmitting output	
				2					(4~20)mA transmitting output, load $\leq 750\Omega$	
				3					(0~10) mA transmitting output, load $\leq 1.5K\Omega$	
				4					(1~5) V transmitting output, load $\geq 250 K\Omega$	
				5					(0~5)V transmitting output, load $\geq 250 K\Omega$	
				6					two-loop (4~20)mA transmitting output (note 3)	
				7					two-loop (1~5) V transmitting output (note 3)	
				8					one-loop (4~20)mA, one-loop (1~5) V transmitting output (note 3)	
				9					two-loop special transmitting output (note 3)	
Feed output									No feed output (may omit)	
				P					DC 24V with one feed output, load $\leq 30mA$	
				2P					DC 24V with two feed output, each channel load $\leq 30 mA$	
Supply mode									AC 220 linear power (may omit)	
				T					AC (90~265)V switch power supply	
				W					DC 24V supply power	

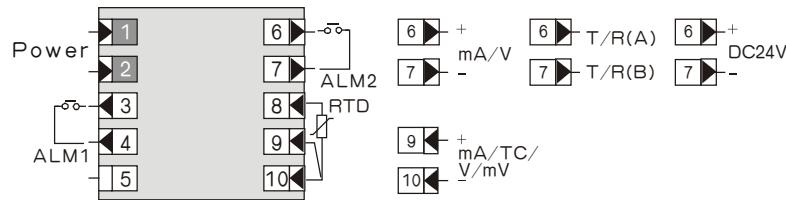

- ★ Note 1: For outline dimension 48×48 instrument, only can select alarm 1 + alarm 2 / transmitting / 485 communication / feed function, can not more than 2; for example: selects up limit alarm + down limit alarm, alarm + communication, alarm + transmitting etc.; transmitting and feed cannot be selected at the same time; no double screen display; no (22~26) V AC-DC power supply.
- ★ Note 2: For outline dimension 72×72 instrument, select alarm +transmitting + 485 communication + feed function, cannot more than 3; Transmitting and feed cannot be selected at the same time.
- ★ Note 3: Two channel transmitting output, only can has one alarm output, no feed output; no (22~26) V AC-DC power supply.

Type example: a project need functions of control temperature instrument are: single screen display communication mode with up-level machine is RS-485, transmit field temperature to standard DC (4~20) mA signal output, with 2 relays control output sensor is K thermocouple, outline dimension is 96×96.

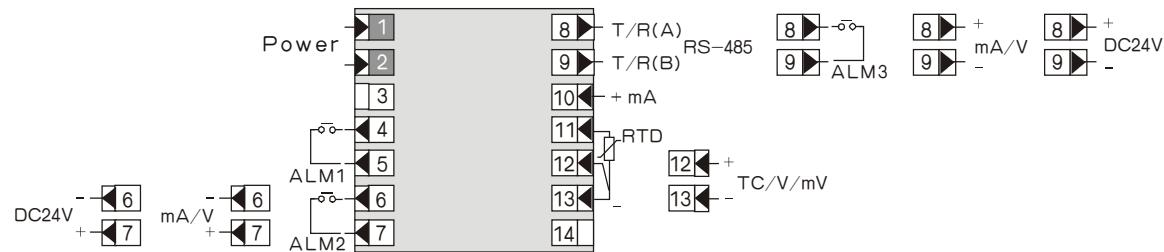

Selected type: WP-8K-91-T03E8220-T

【Double-loop digital /light column display controller】

➤ Product outline

Double-loop digital / light column display controller adopts advanced microprocessors for smart control, and it is suitable for display and control for many variables such as temperature, humidity, pressure, liquid level, instantaneous flow, speed, and so on, as well as can carry out the linear calibration with high accuracy for various non-linear input signals.

It can separate display and control simultaneously for two-loop signals which can be different signal. Input ports all have universal signal input, it can realize light switching between various input signal (thermocouple, thermo-resistance, standard voltage / current signals) by making simple selection on instrument menu. Such feature greatly improves its universality and reliability.

It adopts high brightness LED display and high resolution light column display (proportionality display) to make the measurement or control value more clear and visual. The display mode includes: double screen Digital display, Double screen Digital + Double light column display; control mode: double channel independent each other relay control / alarm output or analog transmitting output.

Output loops all adopt the photoelectric isolation, its anti-interference ability is strong. And it can also carry serial communication interfaces

【Intelligent multi-channel data-logging display controller】

> Summarize

Intelligent multi-channel data-logging display controller adopt advanced microprocessor for smart control, It is suitable for display and control temperature, humidity, pressure, liquid level, instantaneous flow, speed and so on in many physical quantity inspect signal, and can data-logging multi-channel measure signal. it also can carry on high-accuracy linear correction to various non-linear input signals.

Each input port all have function of universal signal input and single channel input, and each channel can input the different type signal at the same time. They only need to simple selection by instrument's menu when input signal is full switching, namely can realized lightly switching in different type input signal (a variety of thermocouple, thermo resistance, standard voltage/current signal), and improved universality and reliability of instrument.

Control output has two kinds: each channel unite alarm / transmit output; each channel respectively independent alarm /transmit output. Unite alarm type again classified into: alarm memory and alarm no memory type. Input/output loop all adopt photoelectric isolation, which have the better anti-jamming ability.

There are two kinds display for high-brightness LED numeric and the whole Chinese large screen LCD liquid crystal. They can take serial communication interface. The whole machine uses cassette insert construction, easy to installation.

【Multi-loop intelligent data logging remote temperature controller】

➤ Product outline

WP multi-loop intelligent data logging remote temperature controller instruments integrate many years of experience for design and production, mix international up-to-date devices and control arithmetic, reflect on a higher level its features of intelligentization, series manufacture and high reliability which is represented by microprocessor.

WP-XTRM series multi-loop intelligent data logging remote temperature controllers (multi-loop temperature transmitters) based on familiar with WP instrument by users offer a wider opening enactment interface for internal parameters, thus users can possess their own right to complete secondary development and no longer rigidly rely on manufacturers for parameters enactment and the series products are widely applied in cements, ceramics and glass industries.

This product adopt Pt 100 thermo-resistance for temperature measurement and the output signal loop among with max. temperature in all loops, it has output of 4~20 mA. In normal operation, the loop with max. Temperature will be shown, but users can sight temperature on any loop through keystrokes on panels. Due to adopt 2-wired international standard signal it possible to communicate with PC or secondary instrument and have strong anti-jamming performance.

Its characteristics such as high performance, low price, smart control, anti-jamming performance, 2-wired signal transmission, field LED display, waterproof and dust-proof performance can well satisfy any requirement for field mounting.

➤ Main technical parameters

>> Input signal

- | | |
|------------------|--|
| Measured channel | • patrolling measurement for 1~4 loops |
| Analog input | • resistance: standard thermo-resistance: Pt 100 |

>> Output signal

- | | |
|--------------------------|--------------|
| Transmitting output load | • 250~750 Ω |
| Output | • DC 4~20 mA |

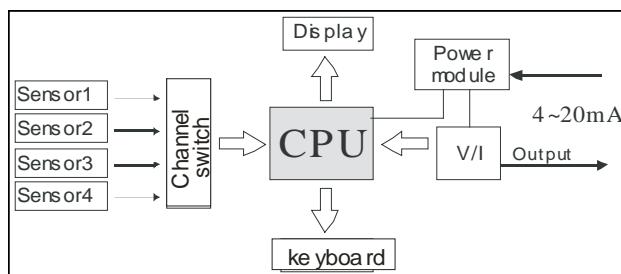

>> Characteristics

- | | |
|--------------------|--|
| measuring accuracy | • display accuracy: ±0.2%FS; transmitting output accuracy: ±0.5%FS |
| resolution | • 0.1 character |
| measuring range | 0.0~200.0°C |
| weight | • 500g |
| outline dimensions | • 110 (W) × 160 (H) × 67 (D) mm |

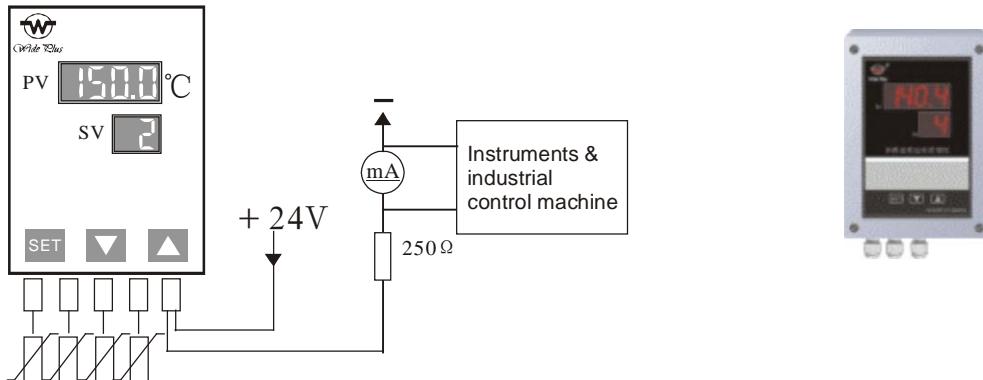

★ WP-XTRM temperature transmitter has multiple inputs and one 2-wired output of 4~20 mA and it is usually installed near the measured point. Its 2-wired output can simultaneously work as both signal output and power supply wire for instruments. The output current can be classified into two parts: the invariable 4 mA –works as “zero” point and as power supply current for electronic circuit of instrument while the variable current of 0~16 mA is direct proportion to variation of measured input signals.

★ The instrument is based on single piece microprocessor of micro power dissipation. The temperature signal from thermo-resistance sensor through input signal circuit can be transmitted from analog signal into digital signal by A/D converter, and after being accurately calibrated by microprocessor according to sampled result send to D/A, the digital signal can be converted to analog signal by D/A converter, which is ultimately converted to output of invariable current of 4~20 mA by V/I converter.

➤ **Block diagram for working principle**

➤ **Drawing for system application**

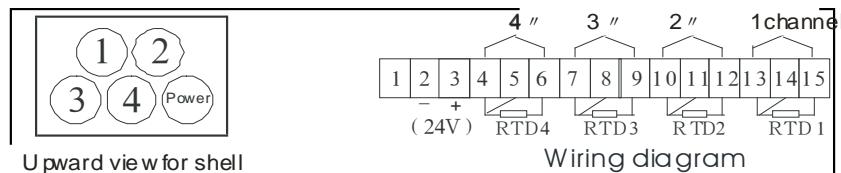

Outline diagram

> **Type spectrum table for multi-loop intelligent remote temperature controller (2-wired output wall suspension type)**

Model				explanation
WP-XTRM	□	□	□□	
Display mode	1			LED digital display
Input channel	Input platinum resistance:	1		One channel input
	Pt 100	2		Two channels input
		3		Three channels input
		4		Four channels input
Measuring range		10		0~100.0 °C
		15		0~150.0 °C
		20		0~200.0 °C

- ★ Note: This product is checking temperature instrument which is special apply in cement industry etc. After every channel is compared it select a channel with max. measurement temperature as transmitting (4~20) mA current output, transmitting output and supply power only share two wires.
- ★ Note: This product may direct install in field, operation environment temperature reachable -20°C ~ 80°C .
- ★ Note: Users need to use a 4 loops temperature monitor with LED display for measurement of Pt 100 between range of 0~150.0°C
- ★ Option as an example: WP-XTRM-1415
- ★ Note: Special requirement ordering contact with WP company, please

【8-loop flash alarm controller】

➤ Product outline

8-loop flash alarm controller adopts advanced microprocessor for smart control, and can match use with our any control instrument or other contact control instrument. It can detect simultaneously 8-loop signals. Inputs and mainframe both adopt photoelectric isolation structure.

Alarm input signals are: contact open-circuit alarm, contact closed-circuit alarm, TTL level signals. Alarm output modes are: flash alarm, sound alarm, relay contact output alarm (optional for memory function or not)

It adopts high brightness LED or long-lifetime planar luminotron separate indicate the current condition for every loop. The operational parameters exceeds the control point, the alarm controller will alarm with sound or flash, as well as output alarm signal. Can carry serial communication interface.

➤ Main technical parameters

>> Input signals

Switched quantity: • Various independent each other contact signals (On/off)

TTL level: Standard TTL level of 0~5 V, high level alarm

>> Output signals

switched quantity output: • relay control output-On/off (with backlash)

• Contact capacity: AC 220V/3A; DC24 V/5A (resistive load)

communication output: • standard serial both-way communication interface

• communication mode: RS-232C, RS-485

• baud rate 300~9600 bps (free set up)

• (only model X803 has communication function)

>> Features

measuring channel

·8-channels (in digital alarm, instrument users can shut any channel which are not using)

display mode ·LED of 0.8 inch high brightness displays the operation state for all channels.

·Displays all channels operation state by planar luminotron tube

·Displays LED operation state

Alarm mode ·sound alarm: 220 V/8W electric bell (self-provided by users), buzzer (built-in instrument)
· Flash alarm: flash alarm for current alarm channel.

Alarm output ·Relay contact capacity: AC220V/3A; DC24V/5A (resistive load)

Silencing test users self-provide the panel silencing button and external connection silencing test button

Parameter set ·Digital set on gently-touched panel keystroke;
·permanent storage of parameter set value even after breaking off.
·Parameters set value can be locked with cipher code

【Single-loop flash and sound alarm controller】

➤ Product outline

Single-loop flash and sound alarm controller adopts advanced microprocessor for smart control, and can match use with our any control instrument or other contact check control instrument.

It can be conveniently fabricated into multi-loop alarm system. On the field normally open/normally closed input mode are optimal for users. PC technology; photoelectric isolation; built-in buzzer, these make circuitry anti-jamming ability is strong extremely. Semiconductor planar flight emitting device make it high brightness, softened color, low power consumption, parallel driven, long lifespan and convenient replacement of screens. The insert-mount construction with multiple output modes such as relay contact output and voltage output make daily maintenance and operation much more convenient.

➤ Main technical parameters

>> Input signal

switched input passive contact switched input (normally open/normally closed)
level input control signal for acoustics usage, high level signal ≥ 4 V

>> Output signal

switched output ·Output a pair of passive normally open contact switch (which will be closed when alarms), contact action synchronizes with sound alarm
·DC level output signal > 4 V
·Passive switched output (normally open: which will be closed when alarms)
·Contact capacity: 3A/24VDC, 0.7 A/110 VAC (resistive load)

>> Characteristics

measured channel	·single channel
silencing test	·external connecting silencing test button function
display mode	·incline luminotron operation state indication ·planar luminotron operation state indication.

>> Operation environment

ambient temperature	$0\sim 50^{\circ}\text{C}$
relative humidity	$\leq 85\%$ RH, without dew and corrosive gas
power supply	DC24 V $\pm 5\%$, input resistance $50\text{k}\Omega$
power consumption	1.8 W when alarm, when without alarm 0.1W

【Intelligent self-tuning PID regulator】

➤ Product outline

Intelligent self-tuning PID regulator adopts advanced microprocessors for smart control, it is suitable for system required the high accuracy regulation and control, and it can automatically figure out the optimal regulating parameters according to different controlled object.

Input ports have universal signal input function, it can realize light switching between various input signal (thermocouple, thermo-resistance, standard voltage/current signal) only need simple selection on instrument menu. So greatly improves instrument universality and reliability.

Instrument can separate with one loop PID regulating signal output and one loop transmitting signal output. output loops all adopt photoelectric isolation and can with seried communication interface.

Instruments adopt high brightness LED digital display and high resolution light column display (proportion display), display mode have two kinds: double screen digital display, double screen digital + double light column display. The later integrates digital instrument and analogue instrument, for measuring value and regulating and controlled target value (or output quantity) carry out simultaneously relative analog quantity proportion display, makes parameter display more clear and visual.

Instrument have auto/manual, manual/auto non-interference switching function.

【Intelligent double-loop cascade PID regulate controller】

➤ Product outline

WP-KS805 series intelligent double-loop cascade PID regulate controller adopts advance microprocessors for smart control. It has switch function for many kinds of input signal, and double screen digital + double light column display mode, and can select RS232, RS 485 serial communication interface and can realize multi-machine communication. The instruments can be applied to high accuracy regulate control systems for much industry. Between input, output all adopt photoelectric isolation, have good anti-interference ability and stability.

WP-KS 805 series double-loop cascade intelligent PID regulate controller have five analog input (1N1—1N5), two analog output (OUT1, OUT2), one switch input D1, two switch output and abundant control algorithm, and suitable for three impulse control or two impulse control of boiler steam drum level and can with steam drum level pressure compensation function, suitable for the cascade control, feed, forward control, double loop control of various process parameters such as temperature, pressure, level, flow in general industrial process, and can with backup manipulator, which match with backup controller to realize manual / auto non-interference switching.

➤ Main technical parameters

>> Input signal

- Resistance: 1N1, 1N2 supports multi specification thermo-resistance, such as Pt 100, Pt 100.1, Cu 50, Cu 100
- Couple: 1N1, 1N2 supports multi specification thermocouple, such as B, S, K, E, J, T, WRe
- Current: 1N1, 1N2, 1N3, 1N4, 1N5 supports 0~10 mA, 4~20 mA (input resistance $\leq 250\Omega$)
- Voltage: 1N1, 1N2, 1N3, 1N4, 1N5 supports 0~5 V, 1~5 V (input impedance $\geq 250K\Omega$)
- One switch signal: DI input only receive dry contact signal, use to receive manual state signal of backup manipulator, it match with analog input 1N3 realize manual / auto non-interference switching of backup operator
- Cold end compensation range: 0~50°C

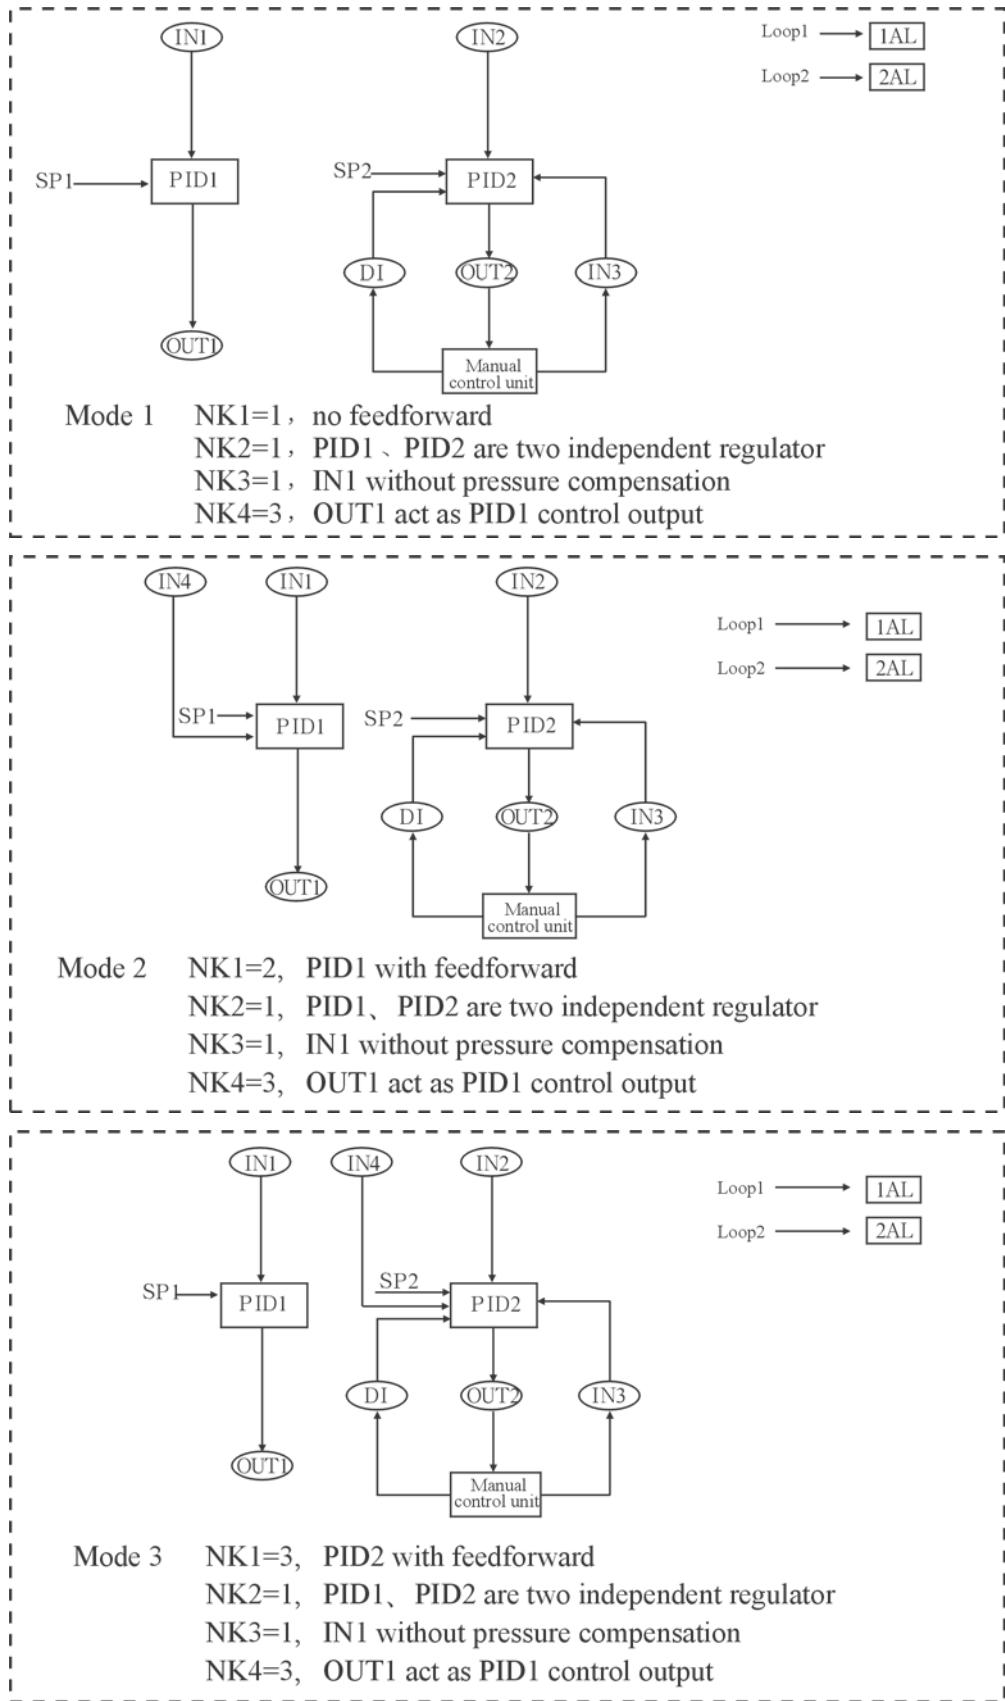

➤ Outline dimension and open hole dimension of instrument

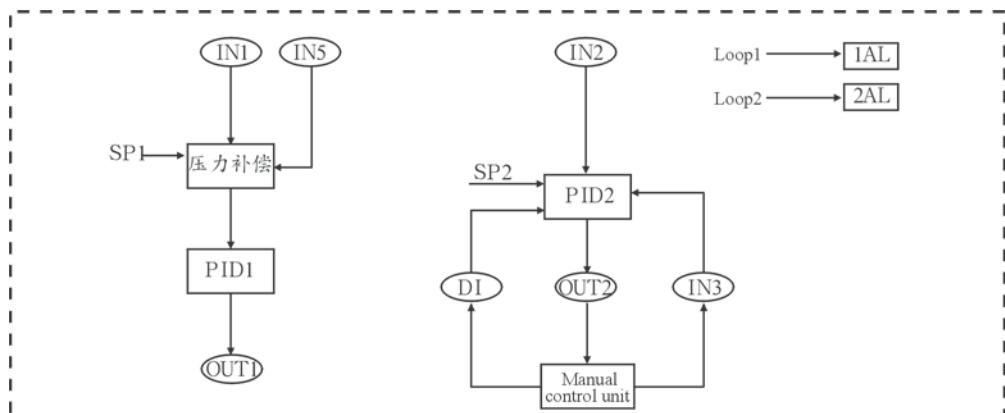

Outline dimension: 80×160×152mm

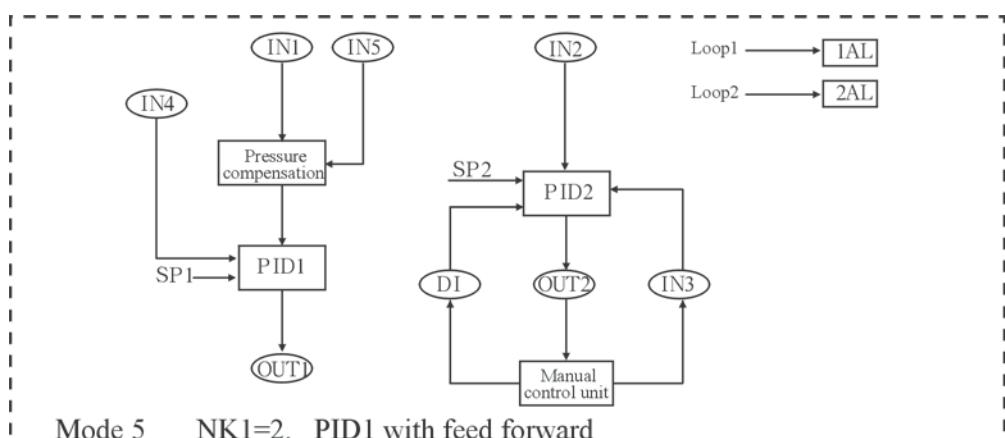

Open hole dimension: 76⁺¹₋₀ × 152⁺¹₋₀ mm

➤ Operation mode for WP-KS805 intelligent double-loop cascade PID regulate controller

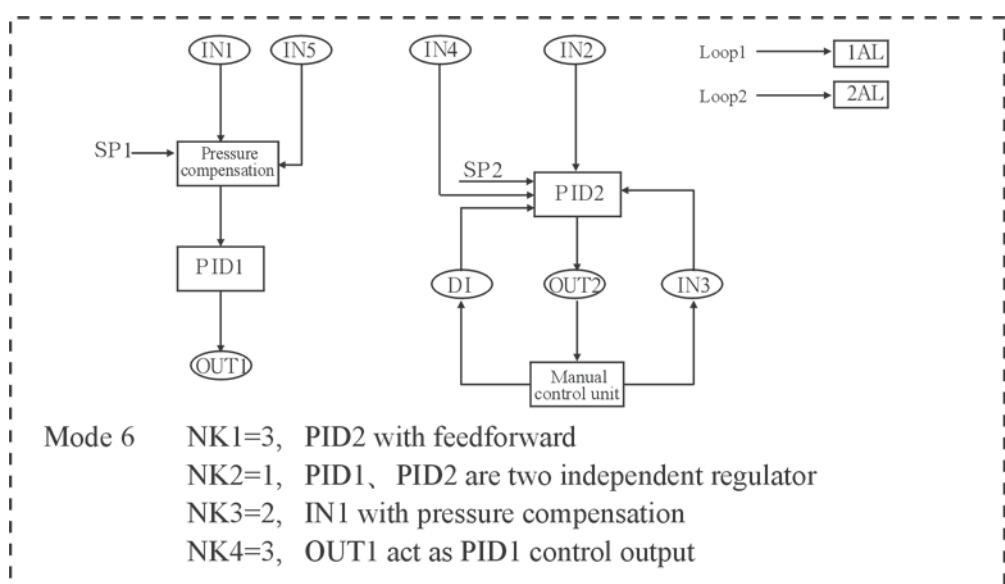

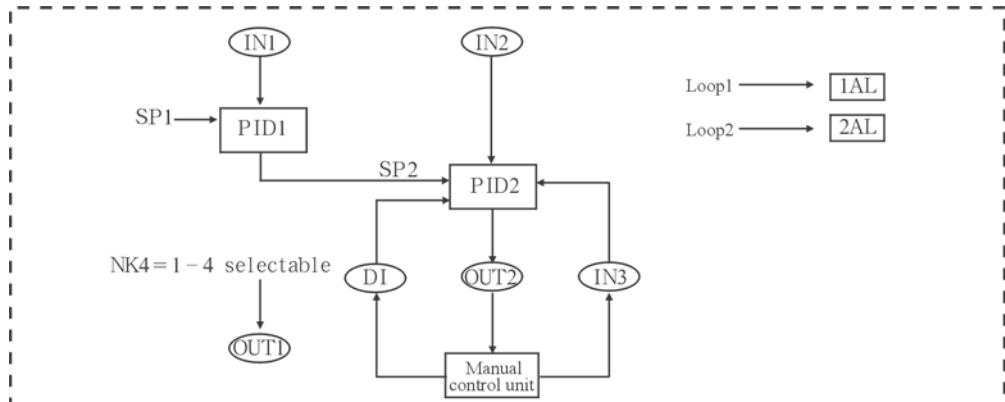

Mode 4 NK1=1, no feedforward
NK2=1, PID1、PID2 are two independent regulator
NK3=2, IN1 with pressure compensation
NK4=3, OUT1 act as PID1 control output

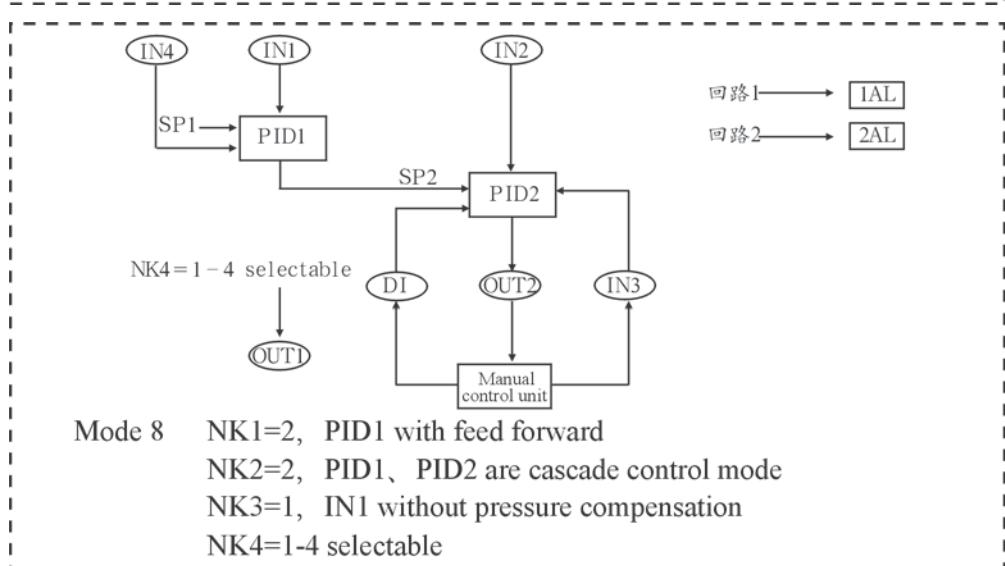

Mode 5 NK1=2, PID1 with feed forward
NK2=1, PID1、PID2 are two independent regulator
NK3=2, IN1 with pressure compensation
NK4=3, OUT1 act as PID1 control output

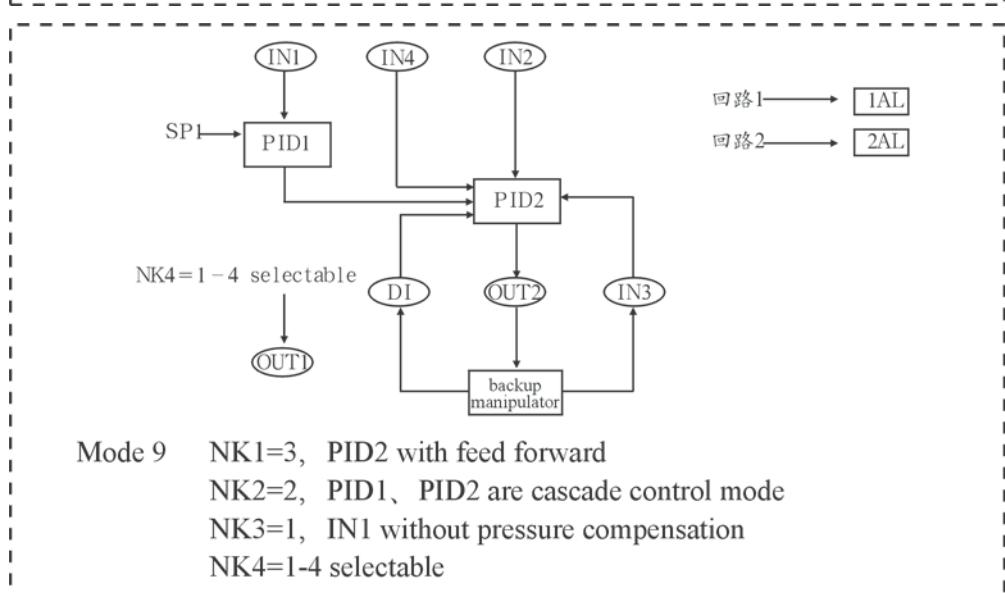

Mode 6 NK1=3, PID2 with feedforward
NK2=1, PID1、PID2 are two independent regulator
NK3=2, IN1 with pressure compensation
NK4=3, OUT1 act as PID1 control output

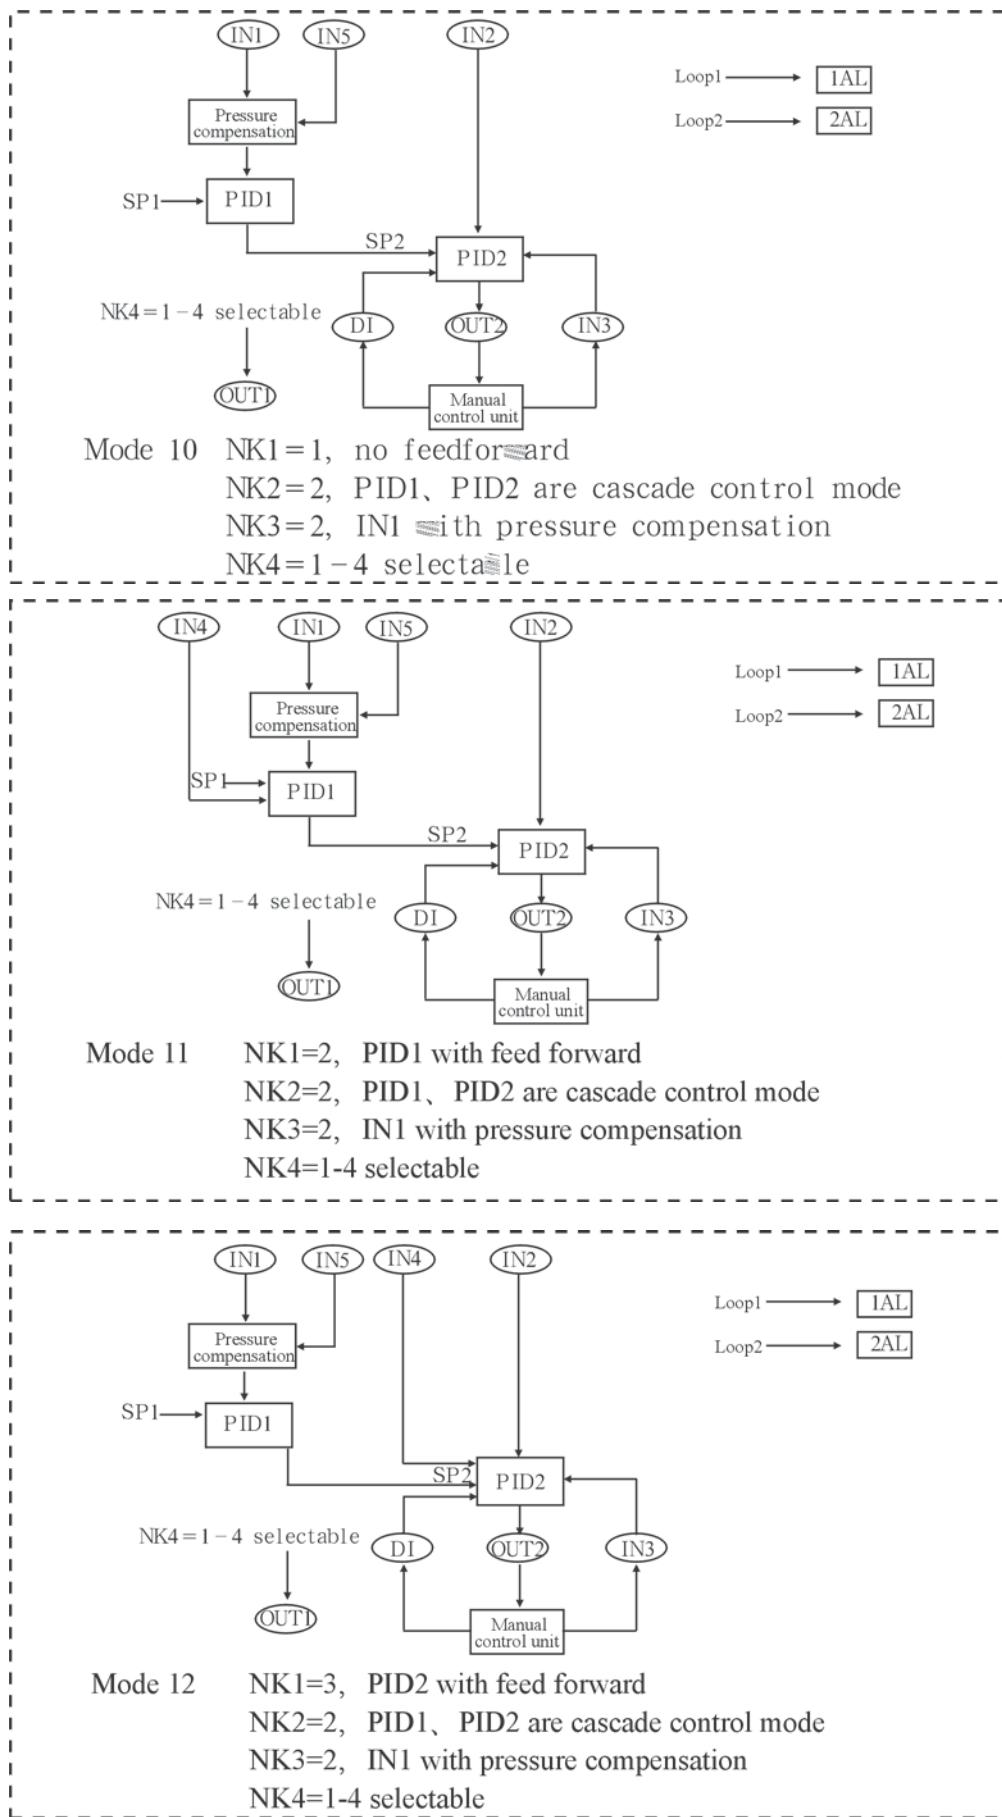

Mode 7 NK1=1, no feedforward
 NK2=2, PID1、PID2 are cascade control mode
 NK3=1, IN1 without pressure compensation
 NK4=1-4 selectable

Mode 8 NK1=2, PID1 with feed forward
 NK2=2, PID1、PID2 are cascade control mode
 NK3=1, IN1 without pressure compensation
 NK4=1-4 selectable

Mode 9 NK1=3, PID2 with feed forward
 NK2=2, PID1、PID2 are cascade control mode
 NK3=1, IN1 without pressure compensation
 NK4=1-4 selectable

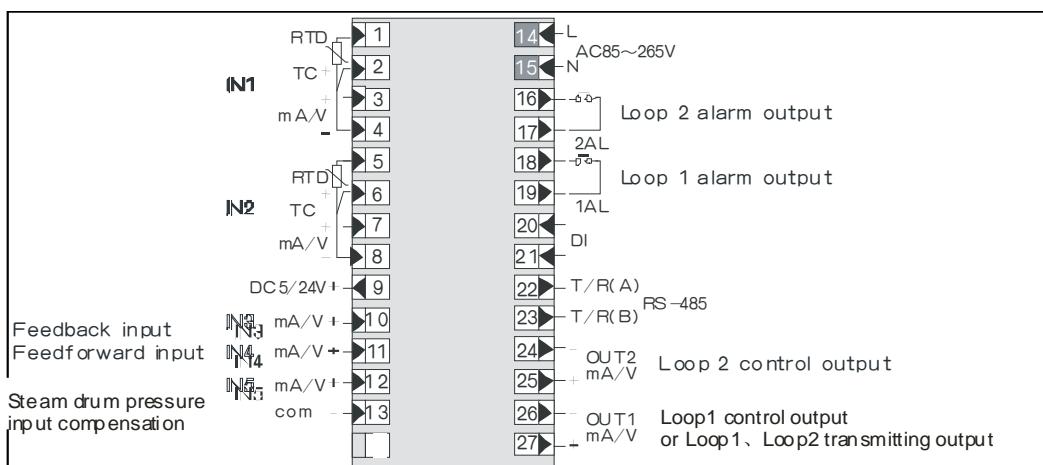

➤ Type spectrum table for intelligent double loop cascade PID regulate controller

		15						Adaptation (0~5)V input
Feed output								DC 5/24V feed output (no feed can be omitted)
			P					DC 5/24V feed output (please note)
Supply mode				T				AC (90~265)V switch power supply

Note 1: IN3, IN4, IN5 is (0~10) mA / (4~20) mA / (0~5)V/(1~5) V input available, is approved (4~20) mA

Option as an example: WP-KS805-022-0312-P-T

➤ Wiring diagram

【Intelligent high performance digital regulator】

➤ Product outline

Intelligent high performance digital regulator WP220 series products with microprocessing function, is ISO9001 authentication, collecting high performance, low price, easy and simple to handle, and so on, integrative practical regulator. Besides adopting self-tuning function and manual/auto non-interference switching also possess the lead adaptive function, in addition, there is two-way PID regulating function and measure loop breaking alarm function. When the sensor breaks down, regulator output could switch to preset output, prevent the equipment damage that may cause due to temperature drops suddenly.

This series of products can be applied to heating furnace, industrial kiln, semiconductor stove, precise temperature control of reaction caldron, boiler heat treatment, temperature control and process control system field such as petrochemical industry、light industrial machinery and so on.

➤ Main technical parameters

>> Input signal

- Analog quantity:
- thermocouple : standard thermocouple B、S、K、E、R、J、T and so on
 - Platinum resistance Pt 100
 - Current: (0~20) mA、(4~20) mA
 - voltage: (1~5) V, (0~5) V

>> Output signal

【Intelligent Manipulator】

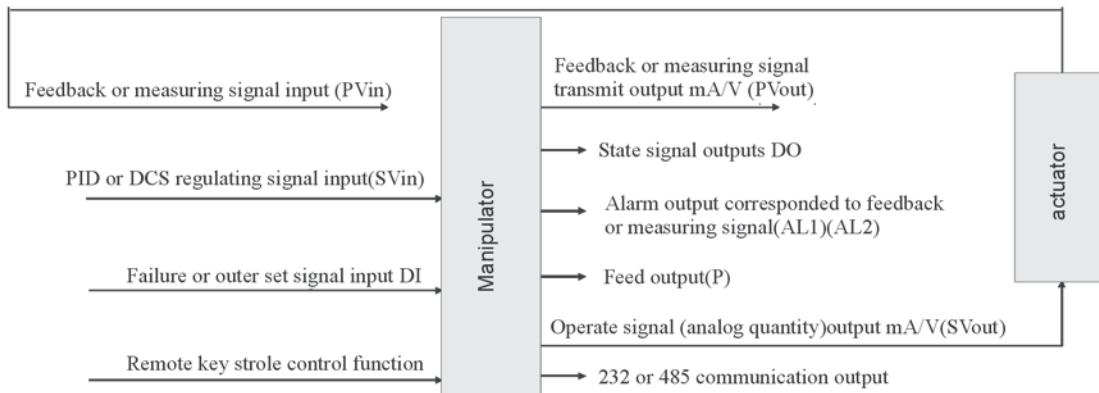

> Product outline

Intelligent manipulator is matching product of PID regulator or DCS and other system, which mainly use to manual regulation under the system running or special condition and to carry out operate as a backup instrument when main machine has happened failure or maintenance. According to field requirement, it provides high-brightness double LED numeric display or high resolution double light column add double LED numeric display, and 160×80, 96×96 and other exterior installation dimensions selectable by user.

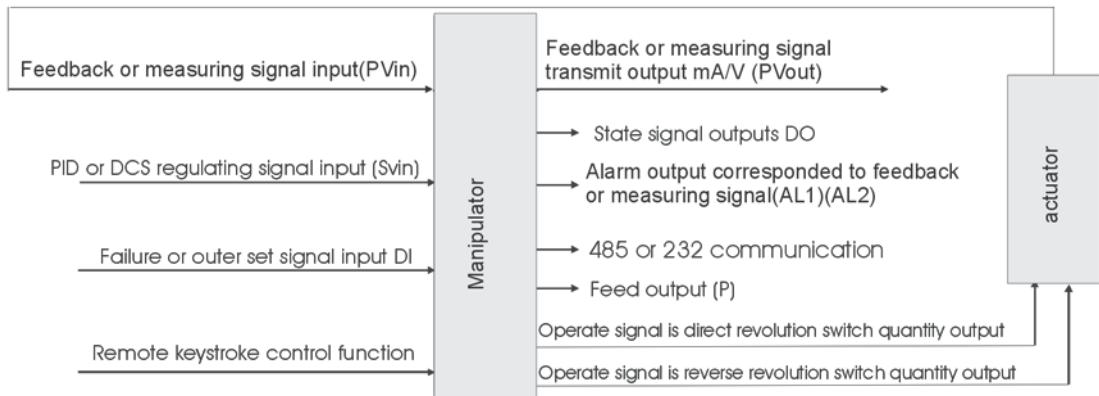

> Mainly technical parameter function characteristic

Intelligent manipulator has manual/automatic control, high/lower amplitude limiting of operation output, follow control and preset control functions and so on. Operational signal has two kinds: one is analog quantity output of direct/reverse action (also called Q type manipulator); the other is direct / reverse revolution switch quantity output (also called D type manipulator), shown as the following block figure (1), (2):

Manipulator signal is analog quantity output (Q type) block diagram (1)

Manipulator signal is direct/reverse revolution (D type) switch quantity output block diagram (2)

1. PID or DCS regulation signal input SVin:

Intelligent manipulator receive the signal of 0~10 mA / 4~20 mA / 0~5V / 1~5V sent from DCS or intelligent regulator.

2. Manipulator signal output

a、Q type manipulator output (Svout): 0~10 mA / 4~20 mA / 0~5V / 1~5V signal, it can directly drive actuator, frequency converter or drive electric regulating valve again from servo amplifier or drive pneumatic thin-film valve from electrical converter and valve positioner. When manipulator is in

automatic work condition, its signal input SVin and operation output signal correspondently is straight-through. in order to realize automatic control of actuator by DCS system or regulator. When in manual work state, its function likes a manipulator, and operational signal output value can direct be modified by increase / decrease key on the panel.

b、D type manipulator output direct/reverse revolution control signal. When manipulator is in automatic work state, its function likes servo amplifier, it carry out regulating control according to the error of input SVin signal and feedback signal of actuator, to ensure actual valve position is following valve position given signal at once and realize automatic control. When manipulator in manual state, its function likes a manipulator, and by the increase or decrease key on the panel can directly operate direct/reverse revolution output signal for which signal 3 ampere relay normal-open contact or 5 ampere capacity bi-directional thyristor, or SSR trigger signal from DC 3 to 24V and so on may be selected.

3. Feedback or measuring signal input (PVin):

PVin signal is valve position signal sent from actuator (linear analog quantity or resistance signal), or field measuring signal. PVin is universal division number switchable input.

4. Feedback or measuring signal transmit output mA/V (PVout)

PVout output signal transmit output to forestage regulator or DCS system, makes system can monitor actual valve position or field measured value at any moment.

5. State signal output DO:

DO is passive switch quantity signal, when manual control, the manipulator outputs the switch quantity closed signal to forestage DCS system or regulator, after they are received DO state signal, then stop PID operation, and make operation signal output follow valve position feedback signal. After manipulator is switched from manual to automatic control, DO state signal is repealed, DCS system or forestage regulator with current output control value as original value to recover PID control. similarly, when manipulator is switched from automatic to manual control state, with current valve position given value as original value, start manual increment / decrement control, thus manual/automatic, automatic/manual state control switching of the manipulator is all non-interference switch.

6. 232 or 485 communication output

According to different option, manipulator may offer 232 or 485 communication function.

7. Failure or outer set signal DI

Manipulator may offer remote compelling manual input signal, the signal can accept dry node or level signal. and usually connect with failure state signal of the forestage DCS system or intelligent regulator, it is use when the forestage DCS system or intelligent regulator happened fault, the manipulator automatically switch into manual state, and makes valve position keeping unchanged, to ensure actual valve position can be controlled in pre-given opening without runaway because forestage regulator or DCS system failure.

8. Alarm output corresponded feedback or measuring signal:

According to different option function and requirement of field control, manipulator may have one alarm (AL1) or two alarm (AL1, AL2) outputs, alarm value are corresponding to display value of feedback or measuring signal (PV).

9. Feed output (P):

According to requirement for system control, manipulator may offer one group or two groups isolated each other capacity for 30 mA of DC 24 V feed.

10. Remote keystroke control function:

According to technology requirement of field control, manipulator can connect with dry node or level control signal supplied for remote operational instrument, its function is the same as each operational key function on the panel.

Supply mode				T	AC (90~265) V switch power supply				

> Additional explanations for option and wiring diagram

As field control system demand to intelligent manipulator in every function exist difference and limit in installation size and wire terminal number, it is appears that the same terminal marks two or three kinds of different function in above wiring diagram. Like in the wiring diagram (1), No. 7, 8 terminals can defined as state signal output DO (manual closed/automatic break) and alarm output ALM. The instrument calibrate the customer requirement function when out of factory, after leaving calibrate cannot revise. Calibrated function in above each wiring diagram is the function of intelligent manipulator normal meter, otherwise is specific meter, double numeric + double light column display only limited use to 160×80, 80×160 outline dimension instrument. If have unused function can be omitted in the above diagram, for specific meter is by the random wiring diagram shall prevail, when ordering please the customer correct choose mode.

Option as example:

For example 1: Technical requirement: 1. The instrument is backup meter of DCS system; 2. DCS system regulation signal is 0~10 mA; 3. Actuator drive signal is 4~20 mA; 4. actuator feedback signal is 4~20 mA; 5. DCS system receives 1~5 V monitoring signal; 6. DCS system receives manual, automatic state signal; 7. DCS system outputs failure signal; 8. System needs 485 communication; 9. Double screen display of the instrument for outline dimension is 160×80 and 96×96, Option as follows:

- ※ For 160×80 installation model double screen digital display type as: WP-D835-824-1213-RM
- ※ For 96×96 installation model type as: WP-D935-824-1213-RM

For example 2: Technical requirement: 1. The instrument is backup meter of PID regulator; 2. PID regulation signal is 4~20 mA; 3. Actuator drive signal is 4~20 mA; 4. Actuator feedback signal is 1~5 V; 5. PID regulator receive 4~20 mA monitoring signal; 6. PID regulator receives manual, automatic state signal; 7. PID regulator outputs failure signal; 8. System needs a group of 24 V feed; 9. System needs two-limited alarm control output; 10. Double screen double light column display of the instrument for outline dimension is 80×160, option as follows:

- ※ For 80×160 installation model double screen + double light column display option as: WP-T835-024-1412-HL-RM-P

【Simple manipulator】

> Product outline

Simple manipulator may do not outer connect signal or connect one-way measure signal namely can direct control operation signal output by keystroke operate, apply to differential kinds of a variety of valve manual locating control, display screen indicates measured value or output percentage, which can be self-set by customer.

> Main technical parameter function characteristic

- ※ Operation signal outputs analog quantity positive or negative action, which can be set.
- ※ Operation signal output direct-reversing switch quantity, its high/low limitting can be set.
- ※ There are all characteristic of on-off control meter with universal division number input.
- ※ Can carry RS 485/RS 232 isolation communication interface.

【Simple backup manipulator】

> Product outline

Simple backup manipulator receive given analog quantity signal from DCS system or PID regulator, when normal control, manipulator input and output equivalent to straight-through, so as to realize that DCS system or PID regulator automatic control the actuator. When forestage DCS system or PID regulator happened fault, manipulator receiving failure signal immediately switch into manual control state, by keystroke controls operation signal output. When failure is removed, the instrument automatic recover automatic state.

【Intelligent flow integrated controller】

> Product outline

Intelligent flow integrated controller adopts advanced microprocessor for smart control, apply to flow detection and integrated control for a variety of liquid, general gas, steam, natural gas and so on. It adopts check table method to carry out density compensate, can automatically carry out high-accurate integrated control for superheat steam, saturated steam. Build-in multiple flow-integrated formulas, suit to a variety of flow measurement field.

The product has multi signal input function. It can match meet a variety of pressure/differential pressure and frequency type flow sensor (like orifice plate, vortex street, turbine, and so on), and only need to pass simple selection of instrument's menu then can realize to lightly switching between above-mentioned input signals, and has improved universality and reliability of the instrument. They have many compensation modes (such as temperature compensation, pressure compensation, temperature compensation + pressure compensation and so on) which offer option for user.

Instrument Measurement display scope is wide can show whole five digits instantaneous flow value, temperature compensation value, pressure compensation value, flow, volume (or differential pressure/frequency) value and so on, and the whole thirteen digit of flow accumulated value (0~9,999,999,999,999), high precision, accumulated value can accurate to back three digit of decimal point (0.001), yet can setting by internal parameter to makes the maximum accumulated value reached 99,999,999,999.99×100. Display carry measure state sign, so can carry out conveniently observation of measured object, input/output loop all adopt photoelectric isolation.

> Characteristics

Mathematical model See instrument's operation manual

Measuring accuracy measurement display accuracy: $\pm 0.5\% FS \pm 1$

Frequency transform accuracy: ± 1 pulse (LMS) general superior to 0.2%

Display mode	high brightness LED digital display Large screen of all Chinese (with back light) LCD (liquid crystal) display LED working state display Current date and time display Five digit (0~99999) instantaneous flow value display Eleven digit (0~99,999,999,999) accumulated flow value display Five digit (0~99999) pressure compensational value display Five digit (-19999~99999) temperature compensational value display Five digit (0~99999) flow (or differential pressure / frequency) value display
Control mode	selectable high / lower limit or high-higher / low-lower limit control, with normal open/close output.

Control setting value free set in all range of the control setting value and hysteresis error value

Quantitative control selectable flow fixed quantity to control, LED output indication

select flow quantitative process control, LED output indication

Compensation mode temperature, pressure, temperature + pressure automatic compensation

【Intelligent programmable natural gas flow integrated controller】

> Product outline

Intelligent programmable natural gas flow integrated controller adopt advanced microprocessor for smart control, mainly suitable use to flow measurement, integration and control for various natural gas, and with automatic compensation function. when operating, it only need to simply input correspondence parameter, immediately can carry out high accurate measurement and automatic compensation operation.

Due to the component of natural gas is very complex in different zone of our country, the product has taken on special design,it set up “Moore component factor” of thirteen kinds, which offer user to select and setup,so as to satisfy measurement for contains various component natural gas, at the same time established many take-pressure way in order to suit to different measure device, and have automatic calculate and display super-compression factor function. Its set standard completely correspond to SY / T6143-96 “standard orifice plate measurement method of natural gas” and GB / T11062-89 “calculate method in caloric value, density and relative density of natural gas” and other national standard. So can completely satisfy measurement request of various natural gas from all parts of oil and gas field and transmission pipeline in our country.

There are switch function of multi-kind signal input, only need to simple setup by instrument’s menu, namely can realize lightly switching between multi-kind input signal, and has improved universality and reliability of instrument.

Adopt full Chinese large screen (with backlight) LCD liquid crystal display, and have page display function can display instantaneous temperature, pressure, flow, super-compression factor, date and time, instantaneous flow, and accumulate flow and so on. Can with serial communication interface.

> Main technical parameter

>> Input signal

Analog quantity	thermocouple: standard thermocouple --- K, E Resistance: standard thermo-resistance ---- Pt100 Current: 0~10 mA, 4 mA~20 mA etc. (input resistance \leq 250Ω) Voltage: 0~5 V, 1 V~5 V, mV etc. (input impedance \geq 250 KΩ)
Switch quantity	start, stop, dean
Input signal switch	temperature compensation: Pt 100, K, E, 0~10 mA, 4~20 mA, 0~5 V, 1~5V (can free switch) Pressure compensation: 0~10 mA, 4~20 mA, 0~5 V, 1~5 V (can free switch) Flow input: 0~10 mA, 4~20 mA, 0~5 V, 1~5 V (can free switch)

>> Output signal

Analog quantity	DC 4~20 mA (load resistance \leq 500Ω) DC 0~10 mA (load resistance \leq 750Ω) DC 1~5 V (load resistance \geq 250KΩ) DC 0~5 V (load resistance \geq 250KΩ)
Switch quantity	Relay control output ---- ON/OFF with return difference Contact capacity: AC 220V/3A; DC 24V/5A (resistive load)
Communication mode	RS -232C, RS—485 Baud rate – 300~9600 bps (free set)
Feed output	DC 24V/30mA

>> Characteristic

Measuring accuracy	$\pm 0.2\%$ FS or $\pm 0.5\%$ FS
--------------------	----------------------------------

Resolution	± 1 character
Display mode	Full Chinese big screen (with backlight) LCD liquid crystal display Display current date and time Display 6-digits (0~999999) instantaneous flow value Display 11-digits (0~99999999999) accumulate flow value Display 6-digits (-199999~999999) temperature compensation value Display 6-digits (-199999~999999) pressure compensation value Display 4-digits (-1999~9999) flow (differential pressure, frequency) value Display 10-digits (0~9999999999) super-compression factor
Control mode	can select high/lower limit or high-higher/low-lower limit control, with normal open/close output
Control setting value	free set for control setting value and return difference value in the full range
Fixed-quantity control	can select flow fixed-quantity to control, LED output indicating
Compensation mode	Can select flow quantitative process control, LED output indicating temperature pressure automatic compensation
Parameter setup	panel touch lightly keystroke digital set Setting value of parameter is permanent retention after power failure Cipher lock for setting value of parameter
Protection mode	Flow accumulation remains more than 5 year after power off Under-voltage of power source can be automatic reset Abnormal work can be automatic reset

【Intelligent heat-energy integrated controller】

> Product outline

Intelligent heat energy integrated controller that adopt advanced microprocessor for smart control, it mainly apply to heat supply, heating, refrigeration and so on heat energy system, for heat energy in the hot water, superheat steam, saturated steam, calcium chloride water or other heating / refrigeration medium carry out high-accurate integration and control. “Heat energy” meanings of the meter includ quantity of heat/cold.

Heat energy enthalpy value table interior contained large capacity, can automatically carry out check table quickly, and calculate corresponding heat energy value (quantity of heat/cold) with real-time flow, and automatically accumulate calculation.

Can inspect energy produced by heat energy system, also can inspect both end temperature in input / output of heat energy system. Through difference value comparison, automatically calculate actual consumption quantity of heat energy by user. Output loop all adopt photoelectric isolation, and have good anti-interference performance. It can carry serial communication interface.

Adopt full Chinese big screen (with backlight) LCD liquid crystal paginally display, it can display whole 6- digits instantaneous flow value, instantaneous heat energy value, temperature compensational value, pressure compensational value, flow (differential pressure, frequency) value and so on, and whole 11- digits accumulating flow value and heat energy value (0~99999999.999 word). Accumulating value can precise to three digits behind the decimal point (0.001).

【WP6210 series thermo-resistance temperature transmitter】

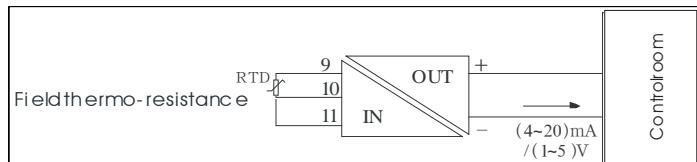

➤ Product outline

WP6210 series thermo-resistive temperature transmitter is a kind of module structure guide way type instrument, which transfer the variation of thermo-resistance into linearly relative to the temperature (4~20) mA DC or (1~5) V DC isolation signal output.

> Main technical parameter

Input signal	Pt 100, Pt 100 Cu 50,Cu 100 thermo-resistance
Output signal	(4~20) mA DC or (1~5) V DC
Load resistance	≤500 Ω when output (4~20) mA DC ≥250KΩ when output (1~5) V DC
Input lead resistance influence	every line resistance ≤5Ω (three-line equal)
Accuracy	0.5 dass
Common mode interference	< 5 mV when 50 Hz
Response time	< 1 s
Isolation	isolates each other between input, output power
Power source	24V DC±2V
Power consumption	< 1.5 W
Ambient temperature	0~50°C
Environmental atmosphere	(86~110) KPa
Relative temperature	< 90% (without condensate)
Insulation resistance:	≥100 MΩ between power source, input, output terminal
Insulation strength:	when apply 500 V AC for 1 minute, between power source, input, output terminal, no arcing, no breakdown
Weight	approximately 150 g
Maintenance	the instrument can be changed in the installation distributing line state

> Schematic diagram of function

> Option

Model	Dividing number	Measuring range °C	Output signal	Channel number	Remarks
WP6211	Cu 50	0~150	(4~20) mA/(1~5) V DC	One-in one-out	Output approves (4~20) mA when out of factory, if need (1~5) V please explain while ordering
WP6212	Cu 100	0~150	(4~20) mA/(1~5) V DC		
WP6213	Pt 10	-200~500	(4~20) mA/(1~5) V DC		
WP6214	Pt 100	-200~600	(4~20) mA/(1~5) V DC		
WP6215	Cu 50	0~150	(4~20) mA/(1~5) V DC	One-in two-out	
WP6216	Cu 100	0~150	(4~20) mA/(1~5) V DC		
WP6217	Pt 10	-200~500	(4~20) mA/(1~5) V DC		
WP6218	Pt 100	-200~600	(4~20) mA/(1~5) V DC		

Note: when ordering must mark the scope of measuring range while ordering (can any choice in the scope)

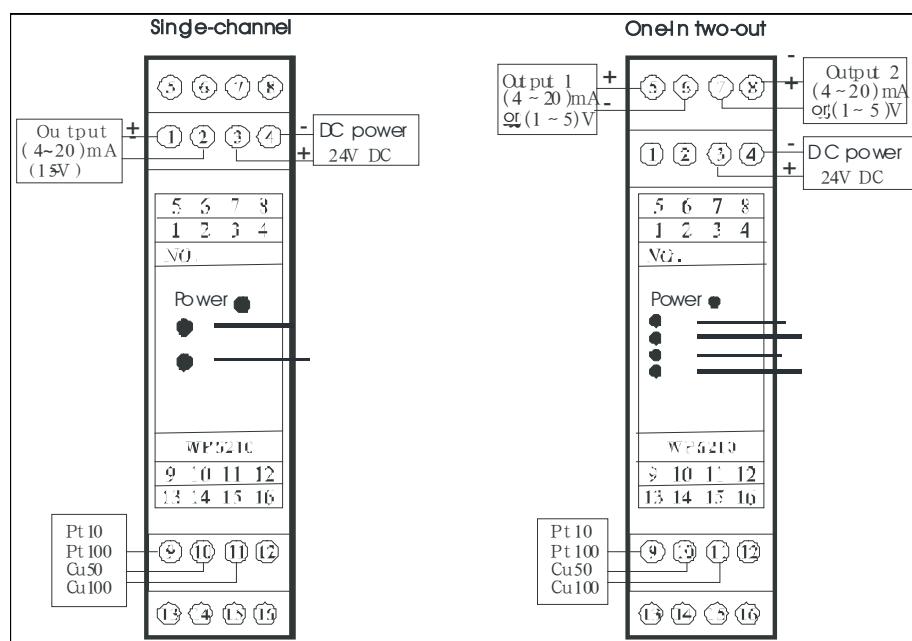

Ordering guide:

If user need thermo-resistance Pt 100 type, then temperature scope of temperature transmitter 0~

200°C

Order model: WP6214 (Pt 100 0~200°C)

Installation: 35 mm DIN guide-way type install

【WP6220/6250 series thermocouple temperature transmitter】

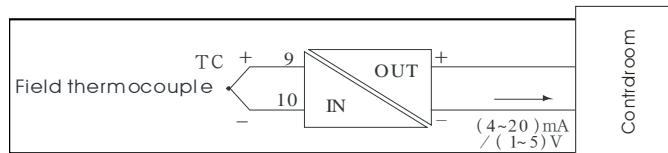

> Product outline

WP6220/6250 series thermocouple temperature transmitter is a kind of module structure guide-way type instrument which transfer the variation of thermocouple into linearly relative to the temperature (4~20) mA DC or (1~5) V DC isolation signal output.

> Main technical parameter

Input signal	E, K, S, B, R, J, T, Thermocouple
Output signal	(4~20) mA DC or (1~5) V DC
Load resistance	$\leq 500 \Omega$ when output (4~20) mA DC $\geq 250K\Omega$ when output (1~5) V DC
Accuracy	0.5 dass
Compensated resistance	Cu 50
Cold-end compensation error	$\leq 1^\circ\text{C}$
Common mode interference	< 5 mV when 50 Hz
Response time	< 1 s
Isolation	isolates each other between input, output, power
Power source	24V DC ± 2 V
Power consumption	< 1.5 W
Ambient temperature	0~50°C
Relative temperature	< 90% (without condensate)
Insulation resistance:	$\geq 100 \text{ M}\Omega$ between power source, input, output terminals
Insulation strength:	when apply 500 V AC, for 1 minute, between power, input, output terminal, no arcing, no breakdown
Weight	approximately 150 g
Maintenance	the instrument can be changed in the installation distributing state

【WP6230 series distributor】

> Product outline

WP6230 series distributor is a kind of modularize structural guide way instrument. It provides isolated power to the field two-wire system transmitter from which the (4~20) mA DC signal to be transformed into isolated with it (4~20) mA DC or (1~5) V DC signal output simultaneously. It supplies indicator, recorder, analogy regulator, programmable single/multi-loop digital regulator, industrial process controller and decentralized system, to constitute a variety of monitoring control system, widely used to the detection and control system in industry production process. This distributor is an indispensable instrument variety to construct non-explosion-proof self-control system.

1. Main technical parameter

Distribution voltage: (18.5~28.5) V

Input signal (4~20) mA DC

Output signal (4~20) mA DC or (1~5) V DC

Load resistance

· ≤500Ω when (4~20) mA DC output, when ordering special load note may provide (250~600)Ω

· ≥250KΩ when (1~5) V DC output

Accuracy 0.5 grade

Common mode interference < 5 mV at the 50 Hz

Response time < 1s

Isolation isolates each other between input, output, power

Power supply 24 V DC ±2V

Power consumption <1.5 W

Environmental temperature (-10~60) °C

Relative humidity <90% (no condensate)

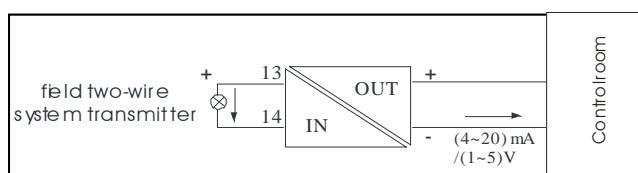

Insulating resistance ≥100 MΩ between power, input and output terminal

Insulating strength when apply 500 VAC, for 1 minute, no arcing, between power, input, output terminal no breakdown

Weight approximately 150 g

Maintenance the instrument may be changed in the installation distributing state

【WP201/202 series isolation transformation module】

> Product summary

WP201/202 series isolation transformation module adopts miniature guide way type structure surface packing technique, has a great improved anti-interference ability of module, It can transform analog signal such as temperature, pressure, flow, displacement, standard voltage and current and so on into isolated with it the standard voltage or current signal output and wide use to fields such as metallurgy, chemical industries, petroleum chemical, papermaking and printing、dyeing, brewing, tobacco and aerospace base and so on.

It may intuitively indicates measuring value, can modify the parameter, easy to field debugging and operation. Two-way transmitter output isolates each other and has current/voltage output choice function also can against the different scope to transmit output respectively, and satisfy field variety requirement.

> Spectrum table for WP201/202 series isolation transformational module

Model										Explanation
WP-20	□	□□	□	□	□	-□□	□□	-□	□	Intelligent numeral display isolation module
Input channel	1									Single channel input

【Intelligent mathematics arithmetical unit】

Intelligent mathematics arithmetical unit adopt mini insert structure, inside employ advanced microprocessor to carry out intelligent arithmetical control, to input parameter can carry out digital arithmetical such as evolution, addition and subtraction, multiplication and division, ration value, and transform into photoelectric isolated voltage or current signal output, and can carry out high accuracy linear calibration to various value of nonlinear input signal.

The unit may select special program display module, may take measuring value corresponded with input signal clearly and intuitionally display in digital mode, pass through company matched programmer user can any select evolution arithmetical scope, and can set small signal removal function. Parameter setup value is permanence store after power failure. Output loops are adopt photoelectric isolation, anti-interference performance is superior, transmission output have voltage or current signal option.

> Main technical parameters

Input voltage or current (may be select by users)

Input resistance >500 KΩ (when voltage input)

< 250Ω (when current input)

Evolution: $S_0 = S_1$ $S_0 \geqslant \text{CUT}$ $S_0 = S_1$ ($S_0 < \text{CUT}$)

mathematic mode • here: so—output signal, S1、S2—input signal, CUT—small signal cut off point (0~100)A、B—coefficient(set up by special programmer)

• note: unused input channel regard as zero to carry out calculate, input/output in formula is that voltage、voltage、current is expressed in normalized numerical value of 0~1.000)

Calculation accuracy ±0.3%FS

arithmetical period 0.4 s

parameter setup to be setting by our company special programmer

output two channel output (photoelectric isolation)

first channel: voltage or current (please noted it while ordering)

second channel: voltage or current, or control/alarm relay ON/OFF output

(AC 220V/0.5A, DC 24 V/1A, resistive load)

or serial communication output: RS-232C, RS-485 (please noted it while ordering)

permission load resistance • ≥250 KΩ (when voltage output) 0~600Ω (when current output)

Insulating resistance • between each terminal and grounding terminal 100 MΩ/DC500V

Insulating strength • between power terminal and grounding terminal: AC 1500 V/1 minute

• between input/output terminal and grounding terminal: DC 500 V/1 minute

Construction • miniaturization inserted structure color: (Manze) N4.0

Weight • main body approximately 180 g socket: approximately 80 g

Maintenance • under the installation conductor configuration state, main body may be change special programmer communication interface locate in the front of main body

【WP30 voltage/current/distribution isolating transformation module】

WP30 voltage/current/distribution isolating transformation module is a kind of miniaturization inserted structural converter, which have three isolations for power terminal, input signal and output signal. and input/output signal employs magnetic isolation, have many features such as high accuracy, good linearity, easy debugging, stable and reliable and so on, suitable use to remove signal interference and uncommon grounding transfer field, especially adaptable to isolation transmission between sensor signal and back-level instrument.

> Main technical parameter

input signal: input (4~20) mA, 0~10 mA, (1~5) V, 0~5 V, 0~10 V or distribution input (the detail the order forms shall prevail, if need other input, user can explaine it while ordering)

input resistance: > 250 KΩ (voltage input), 250 Ω (current input)

output • No. 1: voltage or current No. 2: voltage or current

permission load resistance: < 250 Ω (when voltage ouput) 0~600Ω (when current output)

accuracy: ±0.5% FS or±0.2% FS

isolation: isolate each other between input and output

power source: AC power supply AC 90~265 V or AC 220 V

DC power supply DC24 V ±10% (the random wiring diagram shall prevail)

power consumption when 220V AC, ≤3W, when 24 V DC, ≤300 mA

environment temperature: 0~55°C

relative humidity: 5~99% RH (no condensate)

Insulating resistance: between each terminal and grounding terminal 300 MΩ/500V DC

Insulating strength: between power terminal and grounding terminal 1500V AC,for 1 minute

between Input/output terminal and grounding terminal 500V DC,for 1 minute.

Construction: miniaturization inserted structure color manser N4.0

Weight: main body: approximately 180 g socket: approximately 80 g

Maintenance: under the installation conductor configuration state, main body may be change

Adjusting zero, full range: precision potentiometer on the instrument's panel:

1 adjusting zero: No. 1 output zero minitrim

1 adjusting full: No. 1 output full range mini trim

2 adjusting zero: No. 2 output zero mini trim

2 adjusting full: No. 2 output full range mini trim

		(0~10) mA					
		Special specification					
Second channel Output mode	0 1 2 3 4 5	No					
		(1~5) V					
		(4~20) mA					
		(0~5) V					
		(0~10) mA					
		Special specification output					
Input code	<input type="checkbox"/>			See "input signal type table"			
Supply mode				T	AC (90~265) V switch power (can be omitted)		
				W	DC24 V supply		

Option as an example: WP-301IC2-12; WP-302IC22-12

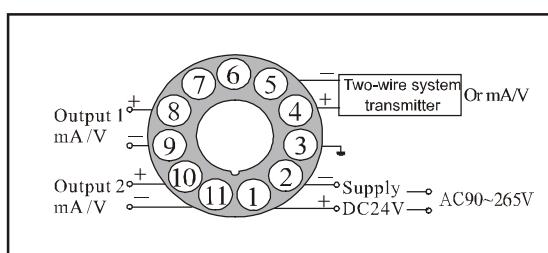

> Input type table

Code	Input type
V	DC (1~5) V, DC 0~5 V or AC voltage input, please noted it while ordering
I	DC (4~20) mA, DC (0~10) mA or AC (0~5) A, please noted it while ordering
K	Others type input, please noted it while ordering

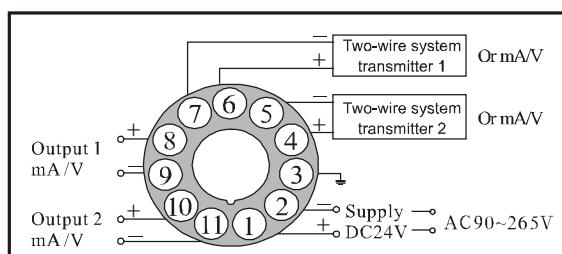

Note: only have one channel input and one channel output for AC voltage or current input signal and output signal.

【 Intelligent counter/digital frequency/ rotating speed/ line velocity instrument 】

Intelligent counter/digital frequency/ rotating speed/ line velocity display control transmit instruments are all adopted advanced microprocessor for smart control. Input is pulsed quantity or contact switch quantity signal, after CPU operation processing, count, rotating speed or line velocity will be clearly indicated by high brightness LED numeral tube, at the same time, these signals can be changed into standard voltage/current signal to transmit output, and have the functions of super-limited alarm, standard serial communication function. Inside the instrument has many kinds of scaling conversion formula which can carry out chosen scale conversion (such as convert into length etc.).

> Type spectrum table for intelligent counter/digital frequency/rotating speed/line velocity instrument

Model										Explanation
WP-LE	□□	-□	□	□	□	□	□□	□		
Category of the instrument	QN									Intelligent counter/digital frequency/rotating speed/line velocity instrument
Instrument name	1									Rotating speed/digital frequency/line velocity instrument
	2									Counter instrument
Display mode	1									Four digit display
										Six digit display (note 1)
Input code		1								Adapt triangular wave, sine wave, square wave signal (500 mV~24V)
		2								Adapt NPN, PNP triode OC gate signal
		3								Adapt passive contact signal
Outline dimension		1								(160×80) mm
		2								(80×160) mm
		4								(48×96) mm
		6								(96×48) mm
		9								(96×96) mm
Communication mode		0								No communication interface (can be omitted)
		2								RS-232C communication interface
		8								RS-485 communication interface
Output mode		0								No transmit output
		2								(4~20) mA transmit output
		3								(1~10) mA transmit output
		4								(1~5) V transmit output
		5								(0~5) V transmit output
		9								Special requirement transmit output
Control mode		N								No control/alarm
		HL								High limit alarm +lower limit alarm
		HH								High limit alarm +high-higher limit alarm
		LL								Lower limit alarm +low-lower limit alarm
Supply mode										AC220V linear power (can be omitted)
										AC(90~265) V (switch power)
										DC 24 V

Note 1: six digit counter, six digit tachometer, six digit frequency meter only can choose (180×60)

Option as example:

(1) WP-LEQN-111180HL

Four digit tachometer; four digit display outline dimension 160×80; RS485 communication. without transmit output, high limit + lower limit alarm, adapt triangular wave, sine wave, square wave signal (500 mV~24V)

➤ outline dimension and open dimension

Outline dimension: 96×48×115mm
Open hole dimension: 92⁻⁰ ×45^{+0.7} mm

Outline dimension: 48×96×115mm
Open hole dimension: 45⁻⁰ ×92^{+0.7} mm

Outline dimension: 96×96×115mm
Open hole dimension: 92⁻⁰ ×92^{+0.7} mm

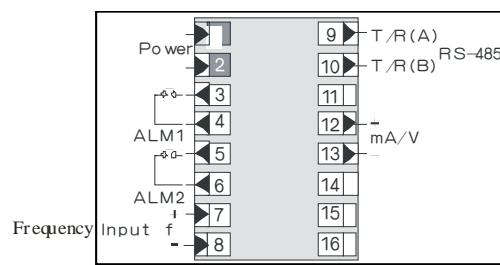

Outline dimension: 160×80×115mm
Open hole dimension: 152⁻⁰ ×76^{+0.7} mm

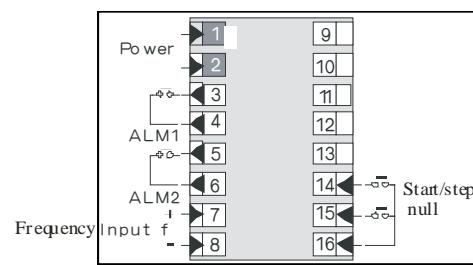

Outline dimension: 80×160×115mm
Open hole dimension: 76⁻⁰ ×152^{+0.7} mm

Counter wiring diagram

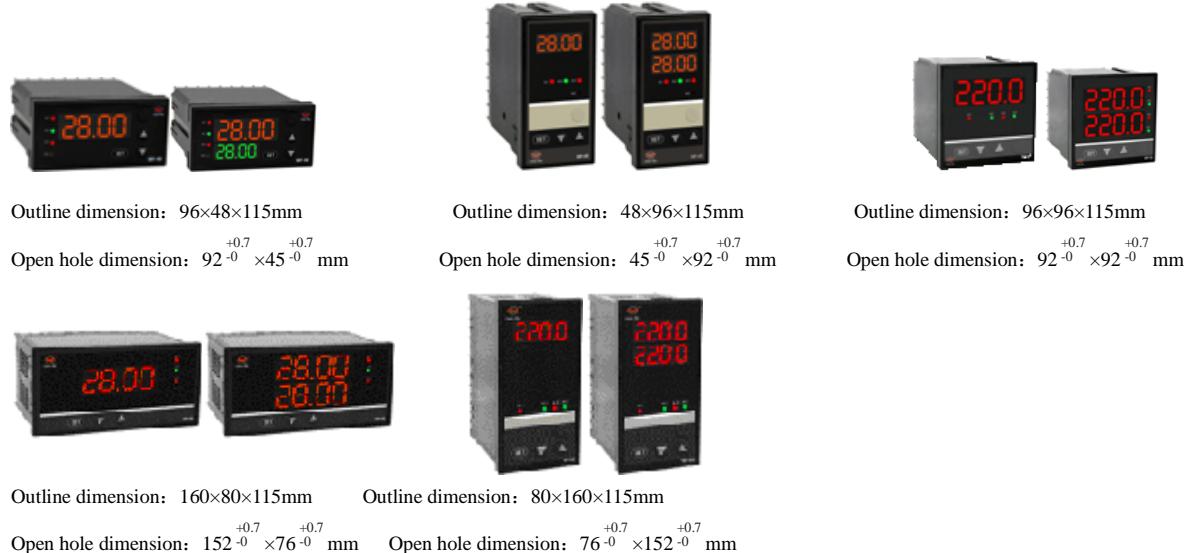

【Digital clock/timer/segment timer】

Digital clock/timer wide use to clocking, timing in every industry field. It is operate brief, clocking accuracy, timing alarm, and with outer connected start/stop, clear function.

Segment timer may use to record present year, month, date, display present time, and with four-segment alarm function, alarm circulate in the sequence of time from first segment to forth segment alarm point it is display intuitional, clocking accuracy, alarm reliable, with clock keep function while key off function. widely apply to buzz, ringdown etc. every alarm field, like enterprise ringdown when communter time

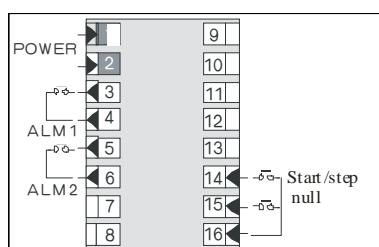

> Outline dimension and open dimension

> Spectrum table

Model							Explanation
WP-LE	□□	□	-□	□	□□	□	
Category of the instrument	QT						Clocking instrument
Instrument name		1					Digital clock segment circle alarm
		2					Timer
		3					Timer
		4					Digital clock (wiring diagram only has power)
Instrument's function		C					Display
		K					Display + alarm
Outline dimension		1					(160×80) mm
		2					(80×160) mm
		4					(48×96) mm
		6					(96×48) mm
		9					(96×96) mm
				E1			Single screen LED digital display
Display mode				E2			Double screen LED digital display
							AC220V linear power (can be omitted)
					T		AC(90~265) V (switch power)
Supply mode					W		DC 24 V supply

【guide-way /socket】

Guide way: use to fix 100 series, 200 series unit combination instrument of this company. can ordering along.

Outline dimension: breadth: 35 mm (the length can be determined according to requirement)

Model name: WP200DIN-□-the length of guide way (m)

Guide way

Socket: employs match with our 200 series unit combination instrument (has matched with instrument when out of factory) can ordering along.

Outline dimension: length × breadth × height: 76×50×18 mm

Model name: WP200TBA

socket
